**Kodai Kubota**

Recruiter – AIML Data Operations AUS

Apple Pty Limited

Level 3, 367 Collins Street

Melbourne VIC 3000

Australia

**Dear Mr. Kubota,**

When I saw the opening for an Annotation Analyst with Apple's AIML Data Operations team, it felt like one of those rare moments where everything aligned.

My interest in AIML began during the early days of the pandemic, when I took a course with the University of Texas on the business applications of AI. I was drawn to how data and language could help systems better understand people. Growing up in Singapore with Indian roots and now studying in Australia, I've always been attuned to how culture and context shape communication. That perspective deepened my curiosity about how intelligent systems interpret nuance across diverse users. Now in the final stage of my Computer Science degree at UNSW, I've explored this further through courses in AI, Human-Computer Interaction, and Natural Language Processing.

Most recently, I completed a capstone project called myPlan++, a tool that helps students plan their academic pathway at UNSW. It included an AI-powered chatbot that guided course selection by factoring in students' interests, academic history, and career goals. As Product Owner, I worked closely with users and clients to turn complex requirements into intuitive features, bridging the gap between backend logic and user experience.

At Apple, I've had the opportunity to work across both the Product Zone and the Genius Bar, giving me hands-on experience with how people actually use and respond to our products. I've developed a sharp eye for detail, a strong sensitivity to tone and intent, and a deep appreciation for how language shapes trust. This approach helped me achieve a 100 NPS score last quarter, something I'm proud of, as it reflects the value of clear and thoughtful communication.

This role really speaks to me because it brings together everything I've been working toward: a passion for language, a growing interest in AI, and a front-row seat to how people experience Apple products. I'm excited to bring that focus, along with my curiosity, care for detail, and firsthand Apple experience, to the AIML team.

Thank you for your time and consideration.

Warm regards,

**Aadira Mohan Nair**
